SIMOVERT MV. The new drive converter which increases the availability

E20001-F0010-P510-X-7600 RTS-RIEGERTeam.DE

If a medium-voltage drive converter increases the availability of your plant, then this is due to its internal circuitry and service. The internal SIMOVERT MV circuitry represents state-of-the-art technology. And our services are completely focused on getting your plant up to speed as quickly as possible in the unlikely

event of a fault. Your benefit: SIMOVERT MV provides you with that all-important decisive edge – or allows you to sleep more soundly at night. Maybe both. But that is not everything. With a SIMOVERT MV variable-speed drive you significantly improve your process and the cost-effectiveness of your plant.

Additional information is available per fax under Siemens AG Infoservice, AD MK/Z352 CE 2, 0911/978 33 21 or in the Internet under www.ad.siemens.de/simovertmv
